

## ***Technical Notes and Case Studies* submitted to ARMA Letters**

### **-Author Guidelines-**

The American Rock Mechanics Association (ARMA) electronically publishes and distributes a publication titled *ARMA Letters*. Technical Notes and Case Studies submitted by ARMA members are expeditiously disseminated this way. Authors may submit original, preliminary contributions that can be later developed into refereed journal papers, or summaries of previously published papers in journals not commonly read by many ARMA members.

*Technical Notes* are short original contributions (1,000 words plus one or two figures) on basic or applied innovative research related to a timely topic.

*Case Studies* are short reports on investigations undertaken in rock mechanics field projects. Important scientific findings, major issues encountered, and lessons learned should be summarized in 1,000 words plus one or two Figures.

Manuscripts should be written in English using Microsoft WORD, 12 pt Times New Roman font, and double line spacing. Figures, figure captions, and tables should be placed at the end of the text. Abstracts are not required. Manuscripts should be submitted electronically by email attachment to the ARMA Publication Committee at [newsletter@armarocks.org](mailto:newsletter@armarocks.org).

The ARMA Publications Committee reviews submissions and accepts those that are relevant and of suitable technical quality. Manuscripts containing commercial advertisements will not be published.
