

Mr. Walters has 18 years of engineering experience, participating in large reservoir and geomechanical engineering studies throughout the world within a multi-disciplinary team environment. Coupled reservoir and geomechanical experience includes steam stimulation projects of heavy oil reservoirs, compaction of sandstone and chalk reservoirs, compaction induced seismicity, modeling fracturing in jointed media, produced water reinjection, water flood fracturing, stress dependence of fractured reservoirs, sand production and wellbore stability. He was a principal and co-founder of Taurus Reservoir Solutions Ltd. since 2000, which has now been acquired by CGG Services (Canada) Inc. He is a registered Professional Engineer with APEGGA and holds BSc. and M.Sc. degrees in Civil and Geotechnical engineering from the University of Calgary.
